

1

Download the Kubu app from the App Store or Google Play and create your account.

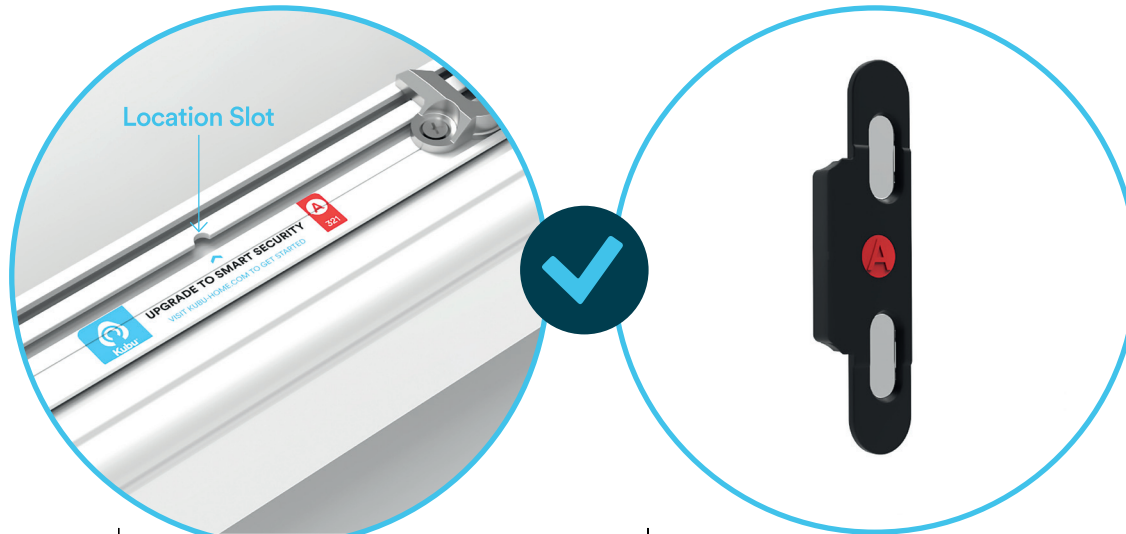

2

Add your window sensor by pressing the + button in the home page of the App.

3

Check your Mounting Bracket. Make sure that the letter and colour on the mounting bracket is the same as on the sticker in your window frame.

4

Place your mounting bracket in the frame directly over the Kubu sticker, ensuring the location notch and arrows on your mounting bracket/ sticker are correctly aligned.

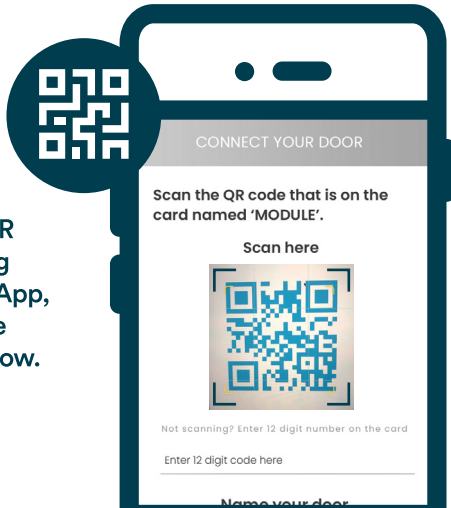

Battery Cover

Now let's get the sensor set up. Using the included screwdriver, unlock the battery cover and fit the coin cell battery. Make sure you lock the cover fully once the battery is fitted.

5

Scan the window module QR code using the Kubu App, then name your window.

6

Wait for your hub to stop flashing and become a static blue colour.

Next, follow the instructions in the Kubu app to ensure you fit your sensor to the window correctly.
